## Project Details

<b>Project Name</b>	<b>Defense Mechanism For DDOS Using Hard AI Problems</b>
<b>Role</b>	Team Member
<b>Description:</b> <p>The project comes up with the idea to provide more security for web and protecting the network from attackers with the help of advanced cryptography and captcha.</p> <p>Using hard AI (Artificial Intelligence) problems for security, initially proposed in , is an exciting new paradigm. Under this paradigm, the most notable primitive invented is Captcha, which distinguishes human users from computers by presenting a challenge, i.e., a puzzle, beyond the capability of computers but easy for humans. Captcha is now a standard Internet security technique to protect online email and other services from being abused by bots.</p> <ul style="list-style-type: none"><li>• Cryptography technique is used for providing security. SHA-1 algorithm for the purpose of encryption and decryption.</li><li>• Hard AI problems are used because that cannot be solve by specific algorithms.</li></ul>
