Career Contour:

Current Employment

Designation: **Sr. Software Developer**

Organization: Gilbarco Veeder-Root Ltd

Duration: Apr '14 till date

Projects Handled:

Project: Gilbarco Enterprise Dashboard

Team Size: 7

Description: This is the product to manage Resources allocated for Project and for managing requirements for New Product Development (NPD) for whole organization including Global teams. Mainly used for Project management office, it provides functionalities to manage Employee's profile, skill set and other details to be used by Project Management Office. It also contains time entry module for daily management purpose.

Environment: .Net, Asp.Net, MVC, JavaScript, JQuery, bootstrap, HTML, SqlServer

Role: Developer.

Project: Gilbarco Assembly Line Automation (GALA)

Team Size: 7

Description: GALA is Gilbarco Assembly Line Automation suite provides an effective mechanism to implement Fuel Management Solution inside industrial plant. G-Site System (GSS) and G-Enterprise Solution (GES) forms critical components of the G-Fuel System. GSS integrates all the systems which are physically located at the fueling location i.e. Assembly Line, while GES forms the Central Database and reporting server which connects with single or multiple GSS endpoints. Today's fueling environment is a low margin, volume based business with an increasing emphasis on technology. GALA is helpful for those companies which are looking for improving business efficiencies, increase system uptime and improve customer experience, reduce human errors and make System Automated.

Environment: ASP.Net, C#, WPF, WCF, Firebird

Role: Developer.

Project: Demo POS (DPOS)

Team Size: 5

Description: DPOS is BackOffice POS application which communicates with Forecourt controller and tells to end user how Forecourt devices are controlled by Controller. A controller is a hardware device which connects Dispenser, Tank Gauges, Payment terminal and other forecourt devices with DPOS. DPOS is used to authorize and De-authorize pumps, to show real-time fueling data, Tank data, clearing transactions, price details and to manage the Controller related tasks like Resetting controller etc. and many more.

Environment: C#, WPF

Role: Developer.
