RAZ Mobile use to create a custom mobile website for signing up , donating online and looking at upcoming events.

Recruiter Management

Recruiter.com is a job portal.

Following different types of users can register on website -

JOB SEEKERS: You can search 6+ million jobs. Stay on top of the job market with Job Alerts. Send your resume to recruiters and employers.

EMPLOYERS: Efficient platform. One point of contact. Unmatched firepower for your hard-to-fill positions. Drive applicants.

RECRUITERS: Access millions of dollars in fee-based jobs. Distribute your jobs to over 2,000 sites. Get help with your hard-to-fill positions.

ADMIN - There is separate admin tools for this website in which admin can manage the jobs, resumes, jobseekers, recruiters, employers etc.

Dashboard Tool - This tool is the reporting tool where admin can check the log activity and all reports.

My contribution:

Recruiter Management:

Search Filters : Added filters to filter the recruiters.

Save searched filters: It will save the searched filters and we can reuse in future to fetch the data.

Bulk Email: To contact single/multiple users via email. In this, We have used tinymce to format the content and signature of an email. User can save his/her template and can reuse in future to send an email.

Resume Repository:

It is a listing of resumes. In this , we have used datatables to list the resumes. Datatables is responsible for search and sort the data column wise.

Search Filters : Search resume by distance (in miles) with solr query.

Save searched filters: It will save the searched filters and we can reuse in future to fetch the

data.

Bulk Email: To contact single/multiple users via email. In this, We have used tinymce to format the content and signature of an email. User can save his/her template and can reuse in future to send an email.

Role/Responsibilities: Required Analysis, Development

Team Size: 12 members.

Environment: PHP , JQuery, HTML, CSS, Ajax, memcache.

mrhomecare

mrhomecare is a CRM plus MIS application. It is used to manage employee, attendance, services, cities and lead sources.

Role/Responsibilities: Required Analysis, Development

Team Size: 3 members.

Environment: PHP , JQuery, HTML, CSS, Ajax, memcache.

chumMe

chumMe is an iPhone App. It allows users to browse through an app and look for other interested users for chatting. User can make friends who are either 1) located nearby, or 2) who have a lot in common with the user such as personal interest, and information of their past such as where they used to live, where they went to college, LIKES of professional teams or places, and checkins from Facebook. All that metadata pulled from Facebook upon sign-up. In this, I worked on web services and admin panel.

Role/Responsibilities: Required Analysis, Development, Testing

Team Size: 3 members.

Environment: PHP, JQuery, HTML, CSS, Ajax, Amazon server, centos.

Yourpricebox

Yourpricebox is a cashback system. It displays the affiliated partner products on site and gives the cashback on it.

Course Management

Registration: This feature allows visitors to sign up for an account by providing their basic details. Once the user has entered all these details, an email containing the username and password would be sent by the Administrator.

Search:- This module enables the users to search for the desired course, and faculty, on the basis of region: i.e. City. The search results would be a grid containing the course name, brief description of the course, faculty name, course date-timings and class capacity.

Course: Student can enroll for the course and also be able to add to favorite for further reference. Once the user has enrolled a course, he is navigated to the payment section, wherein he would enter all the necessary credit card information. Having done the payment, the user would receive an order confirmation mail that would state the following details of the course that he has paid for:- Order ID, Order Date. At any point in time, the following details of the Course Order history would be available to the user: course name, date of registration of the course, course amount, order id, order date and payment status. The student has the liberty to withdraw from the course, after he has attended 2 classes. The Administrator can refund the fees back to the student. For the record, the refund policy would be different for different faculties.

Events:- This module would provide an insight into the following details of upcoming events /seminars:- event name, event host, event duration, event description. Holders of these events would have to pay a specific amount for the activity

Faculty:- This module provides a listing of the faculties (most popular teacher on the top, followed by the remaining ones), courses taken by the faculty, years of experience, skill sets and availability. The user can also rate a faculty, and depending on these ratings the faculty would be eligible for incentives. **Performance Tracking / Grading System:-** This module provides an insight into the student's

Role/Responsibilities: Required Analysis, Development
