Final year project:**Project Title: An Emergency Alarm and Healthcare Management System**

Description: An emergency alarm and healthcare management system, which is mainly deployed in an android-based phone that is conveniently used and carried. So our system is suitable for most of the people. With the help of the GPS and GSM network, the system can make sure the location of the users when they are in trouble and trigger the alarm. When the doctor or family receives the alarm message, they can immediately take measures to rescue the user. It can also manage the health record of the user. The user can take online medical to send their physical condition and then get prescription from doctor who will send the prescription on the user's phone .
