- Ensure that specific elements of the product are thoroughly tested as per the test plan documentation.
- Review bug reports from the test technicians for errors prior to them being entered into the tracking software.
- Revise current test cases to reflect changes made to the test case for CR.

About Project

:

FINACLE

The Finacle is the core banking software solution system used by KMBL which provides client bank account details. All the client bank accounts are opened in Finacle application. The same bank account will be mapped at L4 account level in MWI. There will be a single bank account which would be used for transaction for all products. The MWI Integra will pull bank balance data on a daily basis. Every client is identified with a first holder CRN.

K-SEC

Equity: KMBL is currently using a **K-SEC** system for brokerage. The integration needs to be done with K-SEC system to upload equity transactions, demat holdings and PMS data. After the integration is achieved the wealth system would be able to report the holdings and performance for equity, and PMS.
