Projects

Simulated Creative Learning Application

- 2016–2017 **Guide: Bhavana Turorikar.**
The application enables users to learn and develop creative arts and crafts. This system contains various modules.
Description:
- It uses simulation for learning and decision making.
 - Once the user learns any creative idea it will be saved so that he can view the created model in the near future.
 - Technologies used:
 - Unity 3D

Website Melody

- 2015–2016 **Guide: Smita Patil-Bhoir.**
Created a music listening website that provides the user the following privileges- make an account, listen to music or add songs to favourites list
Description:
- All the data that the user enters is stored in the database
 - The user can select the genre of the music he wants to listen to by navigating through tabs.
 - As additional feature, the website uses slider animation to provide interactive user interface
 - Technologies used:
 - HTML, CSS
 - PHP
 - Javascript

Online Student Admission System

2015 **Guide: Snehal Mumbaikar.**

Online Student Admission System is a web application that provides a simple and user friendly interface for student admission and course registration process

Description:

- It involves maintenance of student's personal, academic and fees related information.
