- Languages/ Technology : C, C++, Core Java .
- Testing Interface : Manual Testing,Selenium WebDriver.
- Databases : MySQL.
- Operating System : Windows 7, 8.10,Unix

Project # 1

Organization : Paratus Systems Private Limited.
Project Name : Avactis Store Demo (Online Shopping System).
Environment : PHP,Ms Access.
Role : Test Engineer.

Project Description:

This project deals with developing an e-commerce website for Online shopping product. It provides the user with a catalog of different product available for purchase in the store. In order to facilitate online purchase a shopping cart is provided to the user. customers can browse the catalog and select products of interest. The selected items may be collected in a shopping cart. At checkout time, the items in the shopping cart will be presented as an order. The customer will be asked to fill or select a billing address, a shipping address, a shipping option, and payment information such as credit card number. An e-mail notification is sent to the customer as soon as the order is placed.

Involved in:

- ✓ Understanding the Requirements and Functional Specifications of the application.
- ✓ Designing of Test scenarios and developed test cases and executed Test Cases as per System Requirements.
- ✓ Extensively performed Manual Testing process to ensure the quality of the software.
- ✓ Manual testing of all modules – Functional, Integration, Regression, Retesting, Cross Browser Testing.

Project # 2

Organization : Sipna C.O.E.T Amravati
Project Name : Information Leak Detection and Prevention System
Environment : Core java,Jsp,Servlet,MySQL,Netbeans.
Role : Developer.

Project Description:

This an application deals with outsourcing of critical data of a business organization that needs a leakage detection system. This application implements a system that helps detecting agents those are responsible for data leakage. There are two users of system one is Distributor and other is agent. Distributor is owner of system. Agent make requests for data to the distributor. The distributor can send data to the agents by inserting fake objects into the data sets of different agents. If agent leaks the sensitive data of the distributor to unauthorised party. Those guilty agents detect through feck object.

Project # 3

Organization : Nagar Parishad Polytechnic, Achalpur.
Project : Medical Inventory System.
Environment : Core Java, Servlet, MS Access.
Role : Developer.

Project Description:

This project is used mainly for medical stores to maintain the details of medical store such as stock and account. This medical inventory system software is so designed as to ease the workload of medical shop professionals. The main feature includes inventory and stock control, accounting. There will be two users accessing system are manager and other staff. Manager act as administrator and have access right. Manager can add, delete, update product and manage store. Other Staff are Cashier can only search the product and make the bill and see the list of available product.

Extra Curriculum Activity

- Participated in Encipher and Guess Me Face Me Competition in Govt. College of Engineering & Technology, Amravati.
