PERSONAL PROJECTS

Project Name- Optical security using canonical transform and QR code. (Image encryption and decryption using transforms). (01/2016 – 06/2016)

- We have presented the approach that uses four random phase mask and two fractional Fourier order. A random phase asymmetric fractional Fourier domain encoding is proposed to encrypt the color image into the stationary white noise by segregated the original image into RGB.

Aircel Telecom Project (Security Agency Module) (01/2013 – 06/2013)

- Aircel, India is a telecom operator providing GSM services. India is divided into 23 defined telecommunications regions, known as "Circles. These circles are generally based on state lines, but some, such as Chennai and New Delhi are cities and some, such as North East, comprise more than one state. We get raw files from our upstream team and process (load) those files for Security Agency Module.
