BE Final Year Project: "Diabetes Diseases Prediction Using Data Mining"

- We designed a system in which the system takes a patient data as a input and an system will predict that patient is diabetes or not.
- In our system, they first request a patient data take as a input of system. And we take eight attributes which is causing factors of diabetes.
- After inserting the data, then system applying a algorithm that is naive Bayes algorithm which is related to probability concept.
- After that our system will predict that patient is diabetes or not. If patient found diabetes then our system will give some suggestions message to the diabetes patient.
