### Project details

<b>PROJECT TITLE:</b>	EMG Based Control Contrivances.
<b>PLATFORM:</b>	Hardware Platforms.
<b>DURATION:</b>	8 months

<b>DESCRIPTION:</b>	EMG is a technique for evaluating and recording the electrical activity produced by skeletal muscles. EMG is performed using an instrument called an electromyography, to produce a record called an electromyogram. An electromyography detects the electrical potential generated by muscle cells when these cells are electrically or neurologically activated. The signals can be analysed to detect medical abnormalities, activation level, recruitment order to analyse biomechanics of human/animal movement.
