Projects

1. System Technology

Description:

- Online Defect Tracking System is useful for applications developed in an organization. It is a web based application that can be accessed throughout the organization.
- This Web application can be used for logging complaints related to application/module and assigning this to respective support team and tracking the complaints to resolution of defects. There are features like email notification, user maintenance, user access control, report generators etc. in this system.

Software Used: ASP.Net, SQL

2. Trust Based Multipath Routing Protocol in Java

Description:

- The trust based multipath routing ensures discovery of multiple path between source and destination.
- The main goal of the project is to provide the trust value to choose secure path in communication between source and destination Nodes.
- In the proposed protocol trust among nodes is represented by trust value. This protocol able to identify trustworthy nodes and find reliable and trustworthy route from source to destination node. Detect malicious activity and then route path.

Software Used: JAVA, SQL
