Projects Undertaken:

4th Year Project
Metadata design for location based film experience in augmented reality

Objective: To develop a mobile application for location based film experience

in augmented reality.

Description: This project is about Augmented Reality (AR) using location based visualization and implementation on the smart phone devices. This application allows user to scan an object and then provides additional information about that object in the form of images and videos. It is combination of the real scene scanned by the user and the virtual scene generated by the computer that augments the entire scene on the smart phone device.

Tools Used: Java, SQL, NetBeans

3rd Year Project
Stationery Management System

Objective: To develop a desktop application for stationery management.

Description: This application allows store manager to manage stationery items and their information. This application provides functionalities such as product searching, product selection, quantity selection, adding product to the cart, order and invoice generation. It also gives information about products which are currently out of stock and needs to be purchased.

Tools Used: Windows Forms, C#, SQL, Visual Studio
