Job Role	Software Tester
Company	Nextalytics Software Services Pvt Ltd
Location	Navi Mumbai, MH
Job Type	Full time
Experience	3 - 4 years

Job Description

Nextalytics is seeking a Software Tester, whose day-to-day responsibilities will include:

1. You will be involved in understanding and capturing the requirements for applications developed and defining the test scope, scenarios and test cases.
2. Produce test scripts that can be used to reliably, accurately and efficiently test the set performance requirements.
3. You're also required to come up with test plans to deliver performance expectations.
4. Build and prepare test environment and execute performance tests using both off the shelf and best spoke tools.
5. Identify performance bottlenecks and issues that exist in the application, investigate, analyse and identify root cause(s) of the underlying problem.
6. Compile reports that reflects summarised and detailed outcome of the tests that have been executed.
7. Escalate issues and coordinate the effort with development, QA and other stakeholders involved to fix the performance issues found.
8. Come up with action items based on the outcome of the tests and follow up on them to achieve the set expectations.
9. Take ownership and sign off performance deliverables when the system has met the defined performance requirements.

Skills set required as below

1. Actively involve in all stages of Testing Cycle
2. Efficiently translate business requirements into effective test scenarios.
3. Familiarity with Test Plan and Test Case Creation
4. Familiarity with Test Reports and Test Deliverables
5. Creation of effective and repeatable Automated Test scripts
6. Execution of test cases with functional, regression and performance testing
7. Work effectively with the development team to ensure all testing activities completed on time and with expectations.
8. Good team player who shares knowledge and experience with team members to build a strong testing foundation and concepts within the team.
9. Experience with testing tools such as Selenium, JMeter and similar.

Education
1. Bachelors Degree in Computer Science or any related field required
2. Post Graduate in Computer Science or any related field would be a plus
