PROJECT :-

 Project Name : "Performance Enhancement of K-mean Algorithm in Hadoop".

Description :- My project contains some advantages of canopy clustering to K-Means clustering mechanism and proposes a pre clustering approach to K-Means Clustering method. It is totally research oriented project.The proposed method aims to apply the clustering algorithm effectively to the given dataset. The extensive studies demonstrate that the proposed algorithm is more efficient and the performance is stable. Thus, by improving time performance we can make an efficient clustering technique.

Modules:-1)Hadoop Installation & System Configurations for single node. 2)Implementation of Canopy clustering algorithm.3)Testing Canopy clustering algorithm.4)Implementation of proposed approach(K-Means algorithm with Canopy   Clustering). 5)K-Means VS. K-Means with canopy
