## Academic Projects:

| 1.RESOLVING MULTI_PARTY PRIVACY CONFLICTS IN SOCIAL MEDIA | |
|---|---|
| Team Size | 4 |
| Environment | JAVA, MySQL |
| Domain | DATA MINING |
| Duration | 3 months |

## Project Description:

The main objective of this project is to increase privacy for the users by resolving the conflicts. Items shared through Social Media may affect more than one user's privacy-e.g., photos that depict multiple users, comments that mention multiple users, events in which multiple users are invited, etc. The lack of multi-party privacy management support in current mainstream Social Media infrastructures makes users unable to appropriately control to whom these items are actually shared or not. We proposed the first computational mechanism to resolve conflicts for multi-party privacy management in Social Media that is able to adapt to different situations by modelling the concessions that users make to reach a solution to the conflicts.

## Personal Details:
